

The new compact & precise

Unguator[®] EMP

The newly designed Unguator EMP

Introduce compounding into your practice with the help of the Unguator EMP. This enhanced electronic mortar and pestle offers quick and consistent preparations while maintaining quality and minimizing contamination. This unit allows the operator to simply, yet effectively, mix topical compounds with the push of a button.

Simply weigh your ingredients into the Unguator Jar and mount it to the machine to be mixed. Next, select your mix duration and your speed settings and press start. The automated mix will then begin.

While the mix is running, you can take this time to do other valuable tasks within your pharmacy. Once the mix is complete, remove the jar from the machine, put your prescription label on the jar, and give the prescription to the patient. It's that simple!

The Unguator product line features a wide variety of jars and accessories to help achieve your desired results with the right combination of equipment.

Unguator® EMP

The EMP takes you for a spin

Created from the highest quality parts, the Unguator® uses sturdy variable mixing motors that keep speed fluctuations to a minimum and ensures consistent preparations every time.

The Unguator® EMP technology offers a very quick and reliable system for creating batch sizes from 15 mL up to 500 mL. This mixing technology offers a closed system that optimizes the results of your formulation mixes plus minimizes cross-contamination and waste.

The Unguator® mixing blades were designed to “sweep” the inner chamber wall of the jar to maximize particle reduction. They offer a sharp leading edge to act as a grinding mechanism and to ensure product homogeneity.

The Unguator® product line also offers a patented push up bottom jar which serves unique functions throughout the mixing process.

The Unguator® Jars can be used for the following:

- Measuring unit
- Mixing chamber
- Storage container
- Unique dispensing jar
