

Find innovation and excellence in the

Unguator[®] PRO

The newly designed Unguator PRO

The Unguator PRO Electronic Mortar and Pestle offers an advanced mixing technology in a closed system that optimizes your formulation mixes.

The Unguator PRO model offers features such as:

Scalable Quality

- Automatic scaling of validated programs from one jar size to another, will support sizes up to 2000 ml
- Enhanced performance for better time efficiency
- Consistant quality and top performance

Reproducible Quality

- Production parameters can be traced easily according to ID-Numbers
- ID-Numbers enable consistant high-quality results
- Replaceable lift arm & quick-lock coupling

Quality Management

- Simplified documentation by integrated barcode scanner
- Quiet operation and highest standards consistently applied

Unguator[®] PRO

The new PRO at elegantly mixing things up

Created from the highest quality parts, the Unguator PRO uses optimized mechanical systems and electronic mixing motors that keep speed fluctuations to a minimum and ensure consistent preparations and enhanced performance every time.

The Unguator PRO technology offers a quick and reliable system for creating batch sizes that can support 15 ml up to 2000 ml*. This mixing technology offers a closed system that optimizes the results of your formulation mixes plus minimizes cross-contamination and waste, all during a quiet performance.

Unguator mixing blades were designed to "sweep" the inner chamber wall of the jar to maximize particle reduction. They offer a sharp leading edge to act as a grinding mechanism and to ensure product homogeneity.

The Unguator product line also offers a patented push up bottom jar which serves unique functions throughout the mixing process.

Unguator jars can be used for the following:

- Measuring unit
- Mixing chamber
- Storage container
- Unique dispensing jar

**Requires the purchase of a separate lift arm for the 2000 ml containers*
